Patent No. 5567807
GENERAL INFORMATION:
APPLICANT: Craig, William S.
APPLICANT: Harper, John R.
APPLICANT: Hernandez, Sam D.
APPLICANT: Parker, Jonathan R.
APPLICANT: Parker, Jonathan R.
APPLICANT: Vedvick, Thomas S.
TITLE OF INVENTION: Processes for the Purification of Human
TITLE OF INVENTION: Recombinant Decorin and the Detection of Guanidinium Ions
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS: ADDRESSE: Campbell and Flores

Sequence 4, Application US/08303238

Patent No. 5654270

GENERAL INFORMATION:

APPLICANT: RUOSAKER, MICHAEL T.

APPLICANT: WHITBY, DAVID J.

APPLICANT: HARPER, JOHN R.

APPLICANT: PIERSCHBACHER, MICHAEL D.

APPLICANT: BORDER, WAYNE A.

TITLE OF INVENTION: INHIBITORS OF CELL REGULATORY FACTORS

TITLE OF INVENTION: AND METHODS FOR PREVENTING OR REDUCING SCARRING

NUMBER OF SEQUENCES: 8

CORRESSONDERGED: CAMBREES:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

COMPUTER READABLE FORM:

MEDIUM TYPE: RIOPPY disk

COMFUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/135,929A

FILING DATE: 14-OCT-1993

CLASSIFICATION: 514

ATTORNEY/AGENT INFORMATION:

NAME: Timian, Susan J.

REFERENCE/DOCKET NUMBER: 20884/23

REFERENCE/DOCKET NUMBER: 20884/23

TELEFOND: (716) 263-1600

TELET: 978450

INPORMATION FOR SED ID NO: 11:

SEQUENCE CHARACTERISTICS:

LENGTH: 610 amino acids

TYPE: amino acids

TYPE: maino acids

TYPE: maino acids

TYPE: maino acids

Sequence 4, Application US/08475891A
Patent No. 585939
GENERAL INFORMATION:
APPLICANT: Ronald, Pamela C.
APPLICANT: Wang, Guo-Liang
APPLICANT: Wang, Wen-Yuang
TITLE OF INVENTION: Procedures and Materials for Conferring
TITLE OF INVENTION: Disease Resistance in Plants
NUMBER OF SEQUENCES: 15
CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TITLE OF INVENTION: Procedures and Materials for Conferring TITLE OF INVENTION: Disease Resistance in Plants NUMBER OF SEQUENCES: 15 CORRESPONDENCE ADDRESS: ADDRESSE: Townsend and Townsend and Crew LLP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note= "Xaa = Leu when position 5471 of RRK-F = G or Phe when position 5471 of RRK-F = C"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-08-587-680A-2

Sequence 2, Application US/08587680A

Patent No. 5977434

GENERAL INFORMATION:
APPLICANT: Ronald, Pamela C.
APPLICANT: Sony Wen-Yuang
APPLICANT: Sony Wen-Yuang
APPLICANT: Sony Veronique
TITLE OF INVENTION: Procedures and Materials for Conferring
TITLE OF INVENTION: Disease Resistance in Plants
NUMBER OF SEQUENCES: 27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note= "Xa21 Xanthomonas spp. disease resistance polypeptide RRK-F from rice (Oryza sativa)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1.0%; Score 8; DB 2; Length 1023; 100.0%; Pred. ```
The present invention describes secreted and transmembrane polypeptides and their polypuclecitides. The nuclectide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New secreted and transmembrane polypeptides and their polynucleotides, useful for treating blood coagulation disorders, cancers and cellular adhesion disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Baker KP,

This is the amino acid sequence of PRO285, a novel human homologue of Drosophila Toll protein, that acts as a pathogen pattern recognition receptor, sensing the presence of conserved molecular structures present on microorganisms. The sequence was deduced from isolated cDNA clone DNA40021-1154 (ATCC 209389) (see AAX58295). The livention provides 3 novel cDNA clones that encode novel human Toll polypeptides PRO285, PRO286 (see AAY05867) and PRO358 (see AAY05868). It also provides specific antibodies and chimeric molecules comprising a PRO285, PRO286 or PRO358 polypeptide, or a transmembrane domain-deleted or inactivated variant, fused to a heterologous amino acid sequence, such as an epitope tag or immunoglobulin Fc region. Being homologues of brosophila Toll
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New human Toll-like receptors that recognize microbial structures

protein, the 3 human proteins are likely to be involved in adaptive immunity, particularly inflammation, septic shock, and response to pathogens in diseases aggravated by the immune response, such as diabetes, amyotrophic lateral sclerosis, cancer, rheumatoid arthritis and ulcers. The PRO polypeptides are used to identify other proteins involved in Toll-mediated signal transduction (e.g. natural ligands), to screen for receptor and ligand mimics, and to generate antibodies. Antibodies specific for the PRO polypeptides (or for the known receptor TLR-2) are used to treat septic shock
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      150

AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bloactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting the polypeptide for specific targeting. The polypeptide targeting the polypeptide pairs provide specific targeting of bloactive molecules to cells. AAC78600 to AAC78877 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel PRO polypeptides and polynucleotides used in detection methods, to target bioactive molecules to specific cells, and to modulate cellular activities -

```
AND AU12172-AAU12446 represent novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to and to link bloactive molecules to cells expressing PRO polypeptides, to modulate bological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor alpha (TNF alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation of finer car utricular supporting cartilage, the proliferation of finer car utricular supporting cells or of T-lymphocytes, the release of a cytckine from peripheral blood moncytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucese or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide coffactor VIIA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polymucleotides encoding PRO polypeptides can be used in gene therapy.
                                                                                                                                                                        3
                                                                                                                                                                                                                                                                                                                Isolated, secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bloactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumours e.g. lung, breast, prostate, cervical
                                                                                                                                                                        Gao

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention specifically describes human DNAX toll-like receptors 2 to 10 (DTLR2-10). The present sequence is human DTLR6 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a DTLR protein or peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid of (3); and (5) a host cell comprising the vector of (4). The host cell of (5) can be used to produce the DTLR proteins. The DTLR proteins can be used to alter phosphate metabolism, to modulate inflammatory function, innate
                                                                                                                                                                                                                                                                                                                                                                                                                                    DNAX toll-like receptor; DTLR; Drosophila toll receptor; IL-1 receptor; interleukin 1 receptor; phosphate metabolism; innate immunity response; modulate inflammatory function; morphological effect;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human DNAX toll-like receptors, DTLR 2-10 - used to, e.g. alter phosphate metabolism, modulate inflammatory function or innate
                                                                                                                                                                                                                                                           seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA1999.DAT:AAW86354

```
The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                               Single exon nucleic acid probes for analyzing gene expression in human brains -

```
The invention relates to human polynucleotides (AAI63803-AAI64012) and the encoded proteins (AAM434497-AAM43660) useful for preventing, treating to a mailorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, cropenital; (b) immune disorders e.g. Addison's disease, allergies, crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias: (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2520 GACTIGIGIGGGCCCAGGAGCACACAAGGCCCAAAGIGIGATCTCCCTGG 2569

The invention relates to novel isolated polypeptides (I), and the invention relates to novel isolated polypeptides (I), and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune consists (e.g. rheumatoid arthritis), inflammatory conditions, organ transplant rejections and graft versus host disease, infectious diseases (e.g. rheading disorders, haemoglobin abnormalities and cher blood-related disorders (alsorders, primary haematopoletic disorders, myloperpoliferative disorders, primary haematopoletic disorders, hyperproliferative disorders (e.g. disorders (e.g. disorders (e.g. disorders (e.g. stroke), renal abnormalities (Down syndrome), ischaemic injury (e.g. stroke), renal alsorders (e.g. glomerulonephritis), cardiovascular disorders (e.g. disorders (e.g. glomerulonephritis), cardiovascular disorders (e.g. dasorder), reproductive system disorders (e.g. arrhythmia), respiratory disorders, dermatological disorders (e.g. arthythmia), respiratory disorders, invended disorders (inflammatory disorders), liver disorders (cirrhosis), as stimulators of B-cell responsiveness to pathogens, activators of trocalis, to induce higher affinity antibodies, and as a means to induce tumour proliferation in pathologies e.g. acquired immune deficiency syndrome (AIDS). ANU17059-AAU17083 represent novel signal transduction con the pathologies of the invention.
prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2919
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2619
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2669
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2719

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAM90355;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human polynuclectides (AAI63803-AAI64012) and the encoded proteins (AAM34497-AAM3660) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of; (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allegies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Clohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     useful for diagnosing,

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Claim 11; SEQ ID NO 17948; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent,

                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAU18552;
     diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK64942 to AAK54950 and AAM81269 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DNAX toll-like receptor; DTLR; Drosophila toll receptor; IL-1 receptor; interleukin 1 receptor; phosphate metabolism; innate immunity response; modulate inflammatory function; morphological effect;

The present invention specifically describes human DNAX toll-like receptors 2 to 10 (DTLR2-10). The present sequence is mouse DTLR6 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a preferably an antibody or antibody fragment which specifically binds to peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (3) a nucleic acid encoding a DTLR protein or and be used to produce the DTLR protein. The DTLR proteins can be used to alter phosphate metabolism, to modulate inflammatory function, innate immunity responses or morphological effects. The DTLR proteins can be used in the treament of conditions exhibiting abnormal expression of the receptors of their ligands. These abnormalities are typically manifested by immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Lung antigen protein; human; mouse; rabbit; goat; horse; cat; dog; chicken; sheep; immunosuppressive; antiathitit; vasotropic; antiproliferative; cytostatic; cardiant; neuroprotective; cerebroprotective; nootropic; antibacterial; virucide; fungicide; cancer; ophthalmological; vulnerary; gene therapy; autoimmune disease; neoplasm; hyperproliferative disorder; breast; liver; cardiovascular disorder; cerebrovascular disorder; nervous system disorder; adorder; hacterial infection; fungal infection; viral infection; coular disorder; espiratory disorder; wound healing; skin aging; corgan transplantation; food preservative; tissue regeneration; anti-infertility; food additive.
...man unax toll-like receptors, DTLR 2-10 - used to, e.g. alter phosphate metabolism, modulate inflammatory function or innate immunity responses

Sequences AAS29839-AAS29930 represent the lung antigen polypeptides of the invention. Lung antigen polypeptides and their associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a lung antigen polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, nervous system disorders such as Alzheimer's disease, infections caused by bacteria,
                                                                                                                                                                                                                                                                                                                  Viruses and fungl, ocular disorders such as corneal infection, endocrine disorders such as premature labour, gastrointestinal infection, endocrine disorders such as premature labour, gastrointestinal infection, endocrine disorders such as queneximal disorders such as a crowner at a glomerulonephritis and respiratory disorders such as asthma and pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. Mote: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNAX toll-like receptor; DTLR; Drosophila toll receptor; IL-1 receptor; interleukin 1 receptor; phosphate metabolism; innate immunity response; modulate inflammatory function; morphological effect;

The present invention specifically describes human DNAX toll-like receptors 2 to 10 (DTLR2-10). The present sequence is partial mouse DTLR6 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a DTLR protein or peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid acid acid (5); and (5) a host cell comprising the vector of (4). The host cell of (5) can be used to produce the DTLR proteins. The DTLR proteins can be used to acid or describe the DTLR proteins. The DTLR proteins can be used to alter metabolism, to modulate inflammatory function, innate to alter property.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DNAX toll-like receptor; DTLR; Drosophila toll receptor; IL-1 receptor; Interleukin I receptor; phosphate metabolism; innate immunity response; modulate inflammatory function; morphological effect; immunological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              immunity responses or morphological effects. The DTLR proteins can be used in the treatment of conditions exhibiting abnormal expression of the receptors of their ligands. These abnormalities are typically manifested by immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                               Human DNAX toll-like receptors, DTLR 2-10 - used to, e.g. alter phosphate metabolism, modulate inflammatory function or innate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA1999.DAT:AAW86362
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3136 AACCCGCAAGCTCACCCATACTTCTGGCAGTGTCTAAAGAACGCCCTG 3183

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention specifically describes human DNAX toll-like receptors 2 to 10 (DTMZ-10). The present sequence is mouse DTLR6 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a DTLR protein or peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid of (3); and (5) a host cell comprising the vector of (4). The host cell of (5) and be used to produce the DTLR proteins can be used to alter phosphate metabolism, to modulate inflammatory function, innate immunity responses or morphological effects. The DTLR proteins can be used inmunity responses or formalism exhibiting abnormal expression of the receptors of their ligands. These abnormalities are typically manifested by immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptide hormone; antidiabetic; anorectic; antianorectic; antiasthmatic; antidepressant; nootropic; neuroprotectant; hypotensive; hypertensive; cytostatic; cerebroprotective; vasotropic; human.
                                                                                                                                        Human DNAX toll-like receptors, DTLR 2-10 - used to, e.g. alte:

The invention provides polypeptides (AAG65886-65918) which may be peptide
bormones (including insulin, growth hormones, chemokines, cytokines,
ce hormones, integrins, kallikreins, lamins, melanins, natruiretic
bormones, neuropepsin, pituitary hormones, pleiotrophins, prostaglandins,
ceretogranins, selectins, thromboglobulins, thymosins) identified by
high throughput genome-based biology and polynucleotides (AAI67176-67208)
cenceding them. The polypeptides can be expressed by standard recombinant
methodology. The polypeptides are useful in the treatment of disease such
as diabetes, breast-, prostate-, colon cancer and other malignant tumors,
typer- and hypotension, obesity, builmia, anorexia, growth abnormalities,
asthma, manic depression, dementia, delirium, mental retardation,
ce sexual development disorders, and dysfunctions of the blood cascade
or sexual miculaing those leading to stroke. The polynucleotides may be used
as diagnostic reagents through detecting mutations in the associated gene
and for chromosome localization and for tissue expression studies. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide hormone; antidiabetic; anorectic; antianorectic; antiasthmatic; antidepressant; nootropic; neuroprotectant; hypotensive; hypertensive; cytostatic; cerebroprotective; vasotropic; human.

The invention provides polypeptides (AAG65886-65918) which may be peptide hormones (including insulin, growth hormones, chemokines, cytokines, neuropeptides, integrins, kallikreins, lamins, melanins, neturiretic neuropeptides, integrins, kallikreins, lamins, melanins, neuropeptides, integrins, thrombosi, prostaglandins, secretogranins, selectins, thrombosi, prostaglandins, secretogranins, selectins, thrombosio, pleiotrophins, prostaglandins, high throughput genome-based biology and polynucleotides (AAI67176-67208) encoding them. The polypeptides can be expressed by standard recombinant methodology. The polypeptides are useful in the treatment of disease such as diabetes, breast, prostate-, colon cancer and other malignant tumors, hyper- and hypotension, obesity, builmia, anorexia, growth abnormalities, as thms, manic depression, dementa, delirium, mental retardation, unitigton's disease, Tourette's syndrome, schlzophrenia, growth, mental or sexual development disorders, and dysfunctions of the blood cascade system including those leading to stroke. The polynucleotides may be used as diagnostic reagents through detecting mutations in the associated gene con control of the polynucleotides may be used and for chromosome localization and for tissue expression studies. The

The present sequence is numan leucine-Tion repeat (LKR) signature caregorical should be considered to residues 252-265 of LKR protein.

C development, signal transduction, DNA and protein are useful for treating, responses and transcription. LKR DNA and protein are useful for treating, preventing haemophilia, bleeding disorders (Bernard-Soulier syndrome), mycoratial infarction, thromboals, sutherosclerosis, glomerular diseases, and toplasty-related restences; viral infections, melanomas, immunological disorders (rheumatoid arthritis, multiple sclerosis, periodontitis); wound healing, burns, ulcers, inclisions and cancer.

C proviesis, systemic lupus erythematosus, infimmatory bowel disease, periodontitis); wound healing, burns, ulcers, inclisions and cancer.

C IRR is also useful for proliferation of neural cells and nerve cregeneration, for treating peripheral nervous system diseases, Huntington's disease, amyotrophic lateral sclerosis and Shy-Drager syndrome);

C disease, infimumatory response syndrome (SIRS)), ischaemia-reperfusion injury, cerebrovascular diseases (stroke); HTV, lung or liver fibrosis, infimumatory archritis, complement-mediated hyperacute rejection, ephritis, cyckine or chemokine-induced lung injury, Crohn's disease, chronic inflammatory archritis, pencreatic cell damage from diabetes

C pulmonary disease, other autoimmune diseases or inflammatory diseases.
                                    multiple sclerosis; psoriasis; systemic lupus erythematosus; burn; ulcer; inflammatory bowel disease; wound healing; cancer; Alzhelmer's disease; psoriations stroke; HIV; fibrosis; lung; liver; nephritis; Crohn's disease; anaphylaxis; hypersensitivity; acute pancreatitis; diabetes mellitus; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel leucine-rich repeat protein-like polypeptides and polynucleotides for diagnosing, treating bleeding disorders, myocardial infarction, atherosclerosis, angioplasty-related restenosis and glomerular diseases

The invention features to insign teuchine incompleted (with) protein recognition, cell adhesion, development, signal transduction, DNA repair, recombination, adhesion, development, signal transduction, DNA repair, recombination, immune responses and transcription. LRR DNA and protein are useful for treating, preventing haemophilia, blending disorders (Bernard-Soulier syndrome), myocardial infarction, thrombosis, atherosclerosis, glomerular diseases, anjoidplasty-related restenosis, viral infections, melanomas, immunological disorders (rheumatoid arthritis, multiple sclerosis, psoriasis, systemic lupus erythematoid arthritis, multiple sclerosis, periodontitis); wound healing, burns, ulcers, incisions and cancer. LRR is also useful for proliferation of neural cells and nerve requested for proliferation of neural cells and nerve crepeneration, for treating peripheral nervous system diseases (Alzheimer's, Parkinson's disease, Huntington's crepeneration for treating peripheral nervous system diseases (stroke); HIV, lung or liver fibrosis, mechanical and traumatic disorders (spinal cord disorders, head trauma) cerebrovascular diseases (stroke); HIV, lung or liver fibrosis, irritation associated with infection (septic shock, sepsis or systemic inflammatory response syndrome (STRS)), ischaemia-reperfusion injury, endotoxin lethality, arthritis, complement-mediated hyperacute rejection, complement mediated hyperacute rejection, endotoxin lethality, arthritis, complement-mediated hyperacute rejection, complements and province of the propose syndrome complement mediated hyperacute rejection, complements and province of the propose syndrome complement mediated hyperacute rejection, complements and province of the propose syndrome complements and province of the propose syndrome complements and province of the province 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nephritis, cytokine or chemokine-induced lung injury, Crohn's disease, anaphylaxis, hypersensitivity, acute pancreatitis, endotoxin shock, chronic inflammatory arthritis, pancreatic cell damage from diabetes mellitus type 1, graft versus host disease, inflammation associated with pulmonary disease, other autoimmune diseases or inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNAX toll-like receptor; DTLR; Drosophila toll receptor; IL-1 receptor; interleukin 1 receptor; phosphate metabolism; innate immunity response; modulate inflammatory function; morphological effect; immunological disorder.
atherosclerosis, angioplasty-related restenosis and glomerular diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present sequence is human garp protein used in the exemplification
                                                                                                                                                                                                                       The invention relates to human leucine-rich repeat (LRR) protein-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA1999.DAT:AAW86365

    The present invention specifically describes human DNAX toll-like receptors 2 to 10 DTLA2-10). The present sequence is human DTLR10 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a DTLR protein or peptide; (3) a mucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid of (3); and (5) a host cell comprising the vector of (4). The host cell of (5) can be used to produce the DTLR proteins and be used to alter phosphate metabolism, to modulate inflammatory function, innate used inmunity responses or morphological effects. The DTLR proteins can be used in the treatment of conditions exhibiting abnormal expression of the receptors of their ligands. These abnormalities are typically manifested by immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Immunomodulatory; human immunodeficiency virus; HIV; anaemla; angina; rhemmatoid arthritis; antlarterlosclerotic; cardiant; vascular; cerebroprotective; thrombolytic; antimicrobial; ophthalmological; cytostatic; Alzheimer's disease; Parkinson's disease; human; cancer; multiple sclerosis; cancer; hyperproliferative disorder; infection; daucher's disease; neurological disease; cerebrovascular disorder; thrombosis; wound healing

The invention relates to novel isolated nucleic acid molecules (I) encoding human secreted proteins (II). (I) and (II) are used to prevent, treat or amelical condition in e.g. humans, mice, rabbits, cords, dogs, chickens or sheep. (I) and (II) may be used in the prevention, treatment and diagnosis of diseases associated with the prevention, treatment and diagnosis of diseases associated with the prevention, treatment and diagnosis of diseases associated with the prevention, treatment and diagnosis of diseases associated with cords and any also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples, and sow which patients may be in need of restorative therapy. (II) may also be used as antignes in the production of antibodies and in assays to identify modulators of agonists and antagonists) of the expression and activity of (II). The anti-(II) antibodies company also be used as diagnostic agents for detecting the presence of (II) in samples (e.g. by enzyme linked immune/autoimmune diseases (e.g. HIV) and in an antipolate and in an antipolate and municiple sclerosis), cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of the breast or liver, Sezary syndrome and caudionas, neoplasms of the breast or liver, Sezary syndrome and caudionas, neoplasms of the breast or liver, Sezary syndrome and caudionas, and charcot-Marie-Tooth disease), cardio-(Parkinson's disease), neurological diseases (e.g. Alzhalmer's disease and Charcot-Marie-Tooth disease), cardio-(Caudher's disease) and charcot-Marie-Tooth disease), cardio-(Caudher's disease), anterdomists and antibodies can also be used to promote wound canding maintain organists and antibodies can also be used to promote wound contains or the antipodies can also be used to promote wound contains or the antipodies can also be used to promote wound contains better the antipodies and antibodies and antipodies and antipodies and antipodies and antipodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of primary tissues. AAU20342-AAU20666 represent human secreted protein amino acid sequences, and related sequences of the invention. Note: The sequence data for this patent did not appear in the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         specification but was obtained in electronic format directly from WIPO at: ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA2001.DAT:AAE07278
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length: 11

The process. Sequence is a larguest of numers recognition, cell adhesion, development, signal transduction, DNA repair, recombination, immune responses and transcription. LNE DNA and protein are useful for treating percention, thrombosis, atherosclerosis, glomerular diseases, angioplasty-related restenosis, unlittiple sciences; glomerular diseases, response systemic lupus erythematosus, inflammatory bowel disease, periodontitis); wound healing burns, ulcers, incisions and cancer. LR is also useful for proliferation of neural cells and nerve cryoneration, for treating peripheral nervous system diseases, central nervous system diseases, falzheimer's, parkinson's disease, Huntington's disease, amyotrophic lateral sciences and Shy-Drager syndrome); creebrovascular diseases (stroke); HIV, lung or liver fibrosis, creebrovascular diseases (stroke); HIV, ung or liver fibrosis, inflammatory response syndrom (SIRS)), ischaemia-repetision injury, condition lethality, arthritic conditions to the ballity arthritic conditions.
                                                                                                                               HIV; Human Immunodeficiency Vitus; haemophilis; bleeding disorder; myocardial infarction; thrombosis; atherosclerosis; glomerular disease; angloplasty-related restenosis; viral infection; rheumatoid arthritis; inflammatory bowel disease; wound healing; cancer; Alzheimer's disease; inflammatory bowel disease; wound healing; cancer; Alzheimer's disease; blung; liver; mephritis; Crohn's disease; anaphylaxis; hypersensitivity; acute pancreatitis; diabetes mellitus; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        endotoxin lethality, arthritis, complement mediated hyperacute rejection, nephritis, cytokine or chemokine-induced lung injury, Crohn's disease, anaphylaxis, hypersensitivity, acute pancreatitis, endotoxin shock,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            chronic inflammatory arthritis, pancreatic cell damage from diabetes mellitus type 1, graft versus host disease, inflammation associated with pulmonary disease, other autoimmune diseases or inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel leucine-rich repeat protein-like polypeptides and polynucleotides for diagnosing, treating bleeding disorders, myocardial infarction, atherosclerosis, angioplasty-related restenosis and glomerular diseases
                                                                                                              Human; leucine-rich repeat protein-like; LRR; cytostatic; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        present sequence is a fragment of human leucine-rich repeat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Arterburn MC, Tang YT,
Yang Y;
                                                                   Human leucine-rich repeat (LRR) protein #1 fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 12; Page 137-139; 156pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mize NK,

The present sequence is a fragment of human leucine-rich repeat

(LRR) protein. LRR protein is involved in protein recognition, cell
adhesion, development, signal transduction, DNA repair, recombination,
immune responses and transcription. LNR DNA and protein are useful for
treating, preventing haemophilia, bleeding disorders (Bernard-Soulier
syndrome), myocardial infarction, thrombosis, atherosclerosis, glomerular
syndrome), myocardial infarction, thrombosis, atherosclerosis, glomerular
classes, angioplasty-related restenosis, viral infections, melanomas,
immunological disorders (rheumatoid arthritis, multiple sclerosis,
psoriasis, systemic lupus erythematosus, inflammatory bowel disease,
psoriasis, systemic lupus erythematosus, inflammatory bowel disease,
periodontitis), wound healing, burns, incisions and cancer.
LRR is also useful for proliferation of neural cells and nerve
regeneration, for treating peripheral nervous system diseases, Huntington's
nervous system diseases (Alzheimer's, Parkinson's disease, Huntington's
disease, amyotrophic lateral sclerosis and Shy-Drager syndrome);
mechanical and traumatic disorders (spinal cord disorders, head trauma)
cerebrovascular diseases (stroke); HIV, lung or liver fibrosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; leucine-rich repeat protein-like; LRR; cytostatic; gene therapy; HIV; Human Immunodeficiency Virus; haemophilia; bleeding disorder; mycozrdial infarction; thrombosis, atherosclerossis; glomerular disease; angioplasty-related restenosis; viral infection; rheumatoid arbhritis; multiple sclerosis; psoriasis; systemic lupus erythematosus; burn; ulcer; inflammatory bowel disease; wound healing; cancer; Alzheimer's disease; Parkinson's disease; cerebrovascular disease; stroke; HIV; fibrosis; lung; liver; nephritis; Crohn's disease; anaphylaxis; hypersensitivity; acute pancreatitis; diabetes mellitus; autoimmune disease.
